

Responsibly Sourced Gas (RSG)

What is Responsibly Sourced Gas?

Responsibly Sourced Gas (RSG), or Certified Gas, is natural gas that exceeds certain methane emission intensity thresholds and meets other Environmental, Social, and Governance (ESG) criteria. Independent third-party verification companies assess criteria that differ between various standards, but generally focus on methane and other air emissions, water use, water quality, and land use.

RSG has the same molecular structure as the traditional natural gas you buy today, with the added benefit of reduced impact on the environment during the production process. That reduced impact helps producers meet various Net-Zero and reduced carbon goals. But more importantly, RSG allows you, the end-user, to purchase natural gas that has reduced or zero Scope 3 emissions to satisfy your own Net-Zero and carbon reduction goals.

Certified natural gas can be transferred as RSG certificates or as environmental credits called Methane Performance Certificates (MPCs). RSG certificates let producers demonstrate how environmentally preferred their product is by reporting to the end user the amount of methane emissions associated with their gas production. This allows end users to report Scope 3 emissions more precisely. MPCs go one step further and quantify their methane emissions vs a national average, and then create MPCs in a volume equal to 1 MPC for every 1 MMBtu of natural gas production with zero methane emissions.

At your request, we can match 100% of your natural gas supply with RSG to reduce or eliminate Scope 3 emissions from the production of that gas.

The Value of RSG:

- Support the reduction of methane emissions in the production of fossil fuels
- Encourage environmentally and socially conscious production of natural gas
- Allows for more precise tracking and measurement of Scope 3 emissions in the natural gas you consume
- Enables a Scope 3 claim of reduced or zero methane emissions from natural gas production
- Serves as an essential component of a carbon-neutral natural gas product

Twin Eagle's RSG will be sourced from certified North American production and retired annually on your behalf.
